The 'Exploring Greenland' project, supported by the Carlsberg Foundation, was the first international, collaborative project to understand research activities in Greenland during the Cold War. The Carlsberg Foundation's website provides an excellent summary of the project and the resulting edited book, *Exploring Greenland: Cold War Science and Technology on Ice* (New York: Palgrave Macmillan, 2016).

This documentary provides a detailed history of Camp Century, setting it in the wider context of the Cold War. This is a great resource to support the teaching of the early Cold War years, whilst expanding the geographical scope of the Cold War for students.

This academic article discusses the negative environmental legacy of Camp Century. Figure 4 shows that, by 2090, the Greenland ice sheet will melt enough to expose the nuclear waste left at Camp Century. Today, this is a cause for major concern and political dispute.

For further information on environmentalism during the Cold War, Jacob Darwin Hamblin research is excellent. In this video, Hamblin explains that military planning during the Cold War created 'catastrophic environmentalism': the idea that humans could cause natural disasters.
